Amoebas

Amoebas, like all protists, are single-celled organisms. Cells are the building blocks for all life forms.
Fingerprints

There are many different types of fingerprint patterns just like there are different kinds of amoebas. Each Fingerprint is not like any other fingerprint in the world. We all have our own special pattern.
Karen Rich Bell

An artist who does sculptures on patristic organisms and microorganisms such as amoebas. Looking through a microscope or photographs, she bases her art on what each individual one looks like and the microscopic world.
Challenge:
To Create Your own amoeba using your own fingerprint based on qualities of yourself.

Questions to ask yourself:

If I were a color what color would I be?
Am I spiky or curvy?
Would I look calm or crazy?
Would I be lots of colors?
Would I have lots of limbs or even a tail?
Would I be Big or small?
Would I have more than one part?
